

Ensure IT -Intruder Detection Services

What is Ensure IT?

No matter how solid your network security, you cannot guarantee against unwanted visitors. Network monitoring is one of the best tools currently available for detecting potential security breaches. With Ensure IT, our trained engineers monitor your network to analyze patterns that might indicate an attack.

Network logs are almost impossible to analyze real-time which may leave your network open for hit and run attacks. Our network based sensors monitor activity in real time as traffic passes along a specific network segment. The network-based sensors provide our engineers the opportunity to interrupt an attack in progress.

How does Ensure IT prevent downtime?

Intrusion detection systems require significant time and expertise to properly customize, implement and monitor. Our properly configured automated intrusion detection system is always on the lookout for inappropriate access to your network. If an attack is detected, the system generates a response ranging from an alert to termination of the suspect connection. By proactively taking the appropriate action, we shut down the intruder before they can cause downtime.

Before installing Ensure IT, we recommend our Secure IT service. Secure IT assesses your network for potential security risks and provides a security assessment report. Using the security assessment report, we provide the corrective action necessary to secure your network. Once you have a secure network, SoftwareUnlimited's Ensure IT service provides installation of the appropriate equipment and monitoring of network activity to detect and limit intruder activity.

How can Ensure IT help me?

Ensure IT provides peace of mind knowing that your network is secure and constantly monitored. By eliminating downtime, Ensure IT enhances your employee productivity.
