

Secure IT -Security Services

What is Secure IT?

Protection of your data is one of your primary concerns. With Secure IT, SoftwareUnlimited provides our clients access to their data while maintaining security to keep out intruders. We provide a range of security services.

SoftwareUnlimited's Secure IT services include:

- Firewall review and/or installation
- Security penetration and vulnerability assessments
- Security policy and procedure manuals
- Security audits and consulting services
- Network backup review and/or installation, network anti-virus protection
- Business continuity (manual, hot site consulting, criticality review, etc.)

How does Secure IT prevent downtime?

SoftwareUnlimited's Secure IT security services provide:

- Tools to determine your risks and vulnerabilities from both internal and external (Internet) threats. Once identified, SoftwareUnlimited works with you to close these vulnerabilities.
- A criticality review to determine the impact of an outage on your organization. Our engineers can prepare business continuity and policy and procedure manuals to minimize the impact of a disruption on your business operations.
- System backups and anti-virus solutions to ensure the safety of your critical data. Our monitoring services provide a regular review to ensure your data is safe and error free. There can be no better peace of mind than knowing your essential business records are fully protected from system failures.

How can Secure IT help me?

Our Secure IT security services increase your employee productivity, enhance your image and reputation, and improve your levels of customer service.
