

The Top 10 Tips To Protect Your “Information Assets”

Concerned that your automated systems control so much of your business that you risk losing money? Use our Top 10 Security tips to protect your “information assets”. Contact us if you would like more information on our **Secure ITSM** security services.

The Top 10 Tips To Protect Your Information Assets

1. Security Policies – Don't Risk Client Trust
2. Backups – Your Initial Defense
3. Viruses – Your Constant Threat
4. Passwords – What You Need To Know
5. Employees – Your Hidden Threat
- 6. Hackers – What You Need To Know**
7. Firewalls – What They Can't Do For You
8. Security Assessments – A Subscription Service
9. Encryption – Protecting Your Data
10. Documents – Managing Your Risk

6. Hackers - What You Need To Know

Hackers know things that you don't. That's their edge. It's the reason that they can break into networks, leaving a path of destruction in their wake. Concerned about security? Your concerns may be directly related to the value of the information you are trying to protect. For example, is your data difficult to recreate? What are the implications if someone outside the company gets access to your confidential documents? You can't always prevent hackers from breaking in, but you can make it more difficult for them to succeed.

Why you need formalized security protection

- Hackers like the challenge of breaking into systems
- Without proper protection, any part of your network is at risk
- Hackers cause network downtime
- Hackers seek out weaknesses in your systems

Your risks

- There is no such thing as a harmless attack – your systems are slowed, your data is destroyed
- Hackers increase your costs
- Data integrity is compromised
- Employee productivity drops due to problems caused by hackers

Security Readiness

Hackers are a risk. Firewalls and other simple boundary devices lack the required intelligence to observe, recognize, and identify attacks. Consider adding protection such as security assessments and intrusion detection systems that help maintain the integrity and confidentiality of your documents.

Call us today and find out how our **Secure ITSM** security services can help protect your information assets.
